PERFEKCIONIZAM SREDNJOŠKOLACA – POVEZANOST SA NEKIM SOCIO- DEMOGRAFSKIM VARIJABLAMA

U ovom istraživanju ispitivan je nivo pojedinih aspekata perfekcionizma (lični standardi, nezadovoljstvo postignutim i urednost) kod srednjoškolaca. Uzorak je činilo 670 učenika, uzrasta 16 do 19 godina, koji srednju školu pohađaju u dva grada (i dva različita regiona) u Srbiji. Ispitivanje je obavljeno uz pomoć skale Almost Perfect Scale-Revised (Slaney et al., 1997), koja se sastoji iz tri subskele: Standardi, Raskorak i Red. Ispitivana je povezanost ovih aspekata perfekcionizma sa pojedinim socio- demografskim varijablama. Između ostalog, dobijeni rezultati govore da značajno više skorove na Standardima imaju ispitanici iz većih mesta, devojke, kao i ispitanici višeg materijalnog statusa; a da je Raskorak (odnosno nezadovoljstvo postignutim) veći kod ispitanika sa sela i kod učenika trogodišnjih i četvorogodišnjih stručnih usmerenja (takozvani „zanati“).

Ključne reči: perfekcionizam, srednjoškolci, adolescenti, APS-R, socio-demografske varijable

PERFECTIONISM OF HIGH SCHOOL STUDENTS – RELATIONS WITH CERTAIN SOCIODEMOGRAPHIC VARIABLES

This study investigated the level of certain aspects of perfectionism (personal standards, dissatisfaction with current achievement and tidiness) on a sample of high school students. The sample consisted of 670 subjects, age 16 to 19, studying high schools in two cities (and two different regions) in Serbia. Data was collected using the Almost Perfect Scale-Revised (Slaney et al., 1997), that consists of three subscales: Standards, Discrepancy and Order. Relations between these aspects of

perfectionism and certain socio-demographic variables were examined. The results show that significantly higher scores tend to have students coming from larger settlement, females and subjects with better economic status. Higher scores on Discrepancy (Dissatisfaction with current achievement) tend to have subjects coming from villages, and students of three and four-year trade schools.

Keywords: perfectionism, high school students, adolescents, APS-R
