EMOCIONALNI PROFIL I DOŽIVLJAJ TELA KOD OSOBA SA TETOVAŽOM

Osnovni cilj našeg istraživanja bio je da se prikaže emocionalni profil i doživljaj tela kod osoba sa tetovažom. Istraživanje je sprovedeno na uzorku od 120 ispitanika, u okviru koga je bilo 60 tetoviranih i 60 netetoviranih osoba. U obe grupe bilo je po 30 muškaraca i 30 žena starosti od 20 do 30 godina. Grupe su ujednačene i po obrazovanju. Korišćeni su Pluchikov indeks emocija Body Distortion Questinnaire, i Lista osnovnih podataka. Pretpostavka od koje smo krenuli je bila da se emocionalni profil i doživljaj tela tetoviranih ljudi značajno razlikuju od emocionalnog profila i doživljaja tela kod netetoviranih ljudi. Polazne hipoteze istraživanja su većim delom potvrđene.

Ključne reči: emocionalni profil, doživljaj tela, tetovaža

EMOTIONAL PROFILE AND BODY IMAGE OF PERSONS WITH TATTOO

Our investigation's main goal was to present the emotional profile and body image of persons with tattoo. It was conducted on the sample of 120 subjects, among which there was 60 tattooed persons and 60 persons without tattoo. There were 30 women and 30 men in age rang between 20 and 30 years, in both groups. The groups were equaled by the age. We applied the next instruments: The List of Basic Biographic Information, the Emotions Profile Index by Plutchik and the Body Distortion Questionnaire. The assumption we have started from was that the emotional profile and body image of tattooed persons significantly differ from the emotional profile and body image of persons without the tattoo. The hypotheses we have started from were mostly confirmed.
