RAZMATRANJE MEHANIZAMA ODBRANE U OKVIRU ADAPTIVNOG PONAŠANJA I RAZVOJNIH ISTRAŽIVANJA

U ovom radu veoma složen, izvorno psihoanalitički koncept, razmatra se u svetlu adaptivnog ponašanja i rezultata razvojnih istraživanja. Postoje teškoće u preciznom definisanju kriterijuma i procene ponašanja koje ima odbrambeni kvalitet. Mnogobrojna istraživanja koja koriste različite instrumente procene ukazuju da još uvek postoje kontradiktorni stavovi o ovom problemu i pretpostavljamo da će dalja istraživanja omogućiti usaglašenije stavove.

Ključne reči: mehanizmi odbrane, adaptacija, razvoj

DISCUSSION OF THE DEFENSE MECHANISMS WITHIN ADAPTATION BEHAVIOR AND DEVELOPMENT RESEARCH

This paper discusses a complex, primarily psychoanalytic concept in the light of adaptive behavior and results of developmental research. There are difficulties in a precise definition of the criteria and evaluation of defense behavior. Much research that employs different evaluation instruments point at the existence of contradictory attitudes concerning this issue. Relevant research indicates that further investigations will enable more unison approaches.

Keywords: defense mechanisms, adaptation, development
